COATINGS

Omar Coatings, in constant evolution.

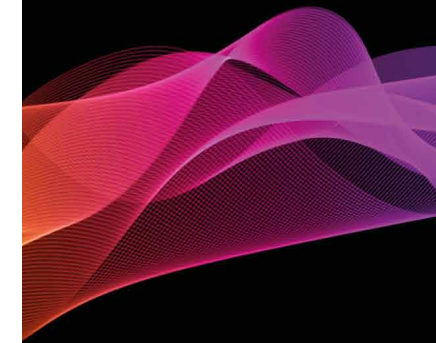

Omar Coatings has managed to establish itself as an industry leader in the paint and varnish sector due to the constant development updates they make to their systems, products and production processes. Their impressive growth and the expansion of their facilities over recent years has been accompanied by an increased demand for their products within the market, establishing a solid reputation in the professional sector.

High-quality products.

Their wide range of high-quality products, approved with the latest international standards, builds and establishes loyalty between customers and the manufacturer and opens the door to new markets with increasingly specialised demands.

Cutting-edge technology for a better service.

Omar Coatings uses the best and most modern production equipment with the most advanced technology, and applies it to all areas of the company: distribution, production, storage and recycling of its products. These elements are utilised to support their business philosophy, which involves a tireless determination to satisfy the demands of their customers and work closely with them to resolve any needs or technical queries.

Your imagination, no barriers

A Solid Surface in liquid format for spray application, developed by **Omar Coatings**, based on isophthalic resins with high mechanical resistance and dimensional stability and modified with neopentyl glycol and methacrylate. It contains natural minerals with high chemical purity that are non-corrosive and toxin-free, such as the aluminium trihydrate (ATH).

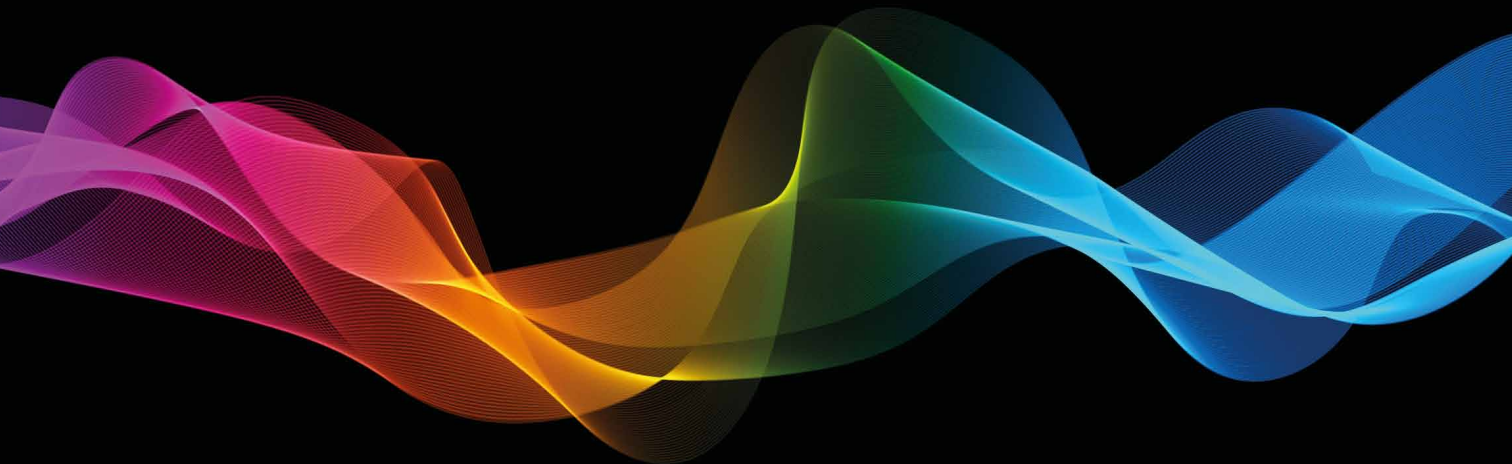

It can be applied on various different substrates, such as melamine board, water-repellent MDF or polyester resin; the shapes and dimensions depend only on the designer's imagination and the needs of the space.

*With OmarSolid Surface,
it is only you who sets the limits.*

Once the application process has been completed, **OmarSolid Surface** provides an extraordinary and unique solution. A texture that evokes natural stone while maintaining a constant temperature, even under drastic environmental changes. It is highly durable, easy to repair and resistant to the most common household cleaning products,

meaning it is incredibly easy to clean. It has natural anti-bacterial properties, a BS2D0 fire rating and will not turn yellow from UV rays.

*With OmarSolid Surface,
it's now your turn.*
